The Oxford Handbook of Energy Politics Kathleen J. Hancock, Juliann Emmons Allison, 2020-12-02 The global, regional, and local energy landscape has changed dramatically in the twenty-first century. Many factors have affected what we know about energy: a consensus among scientists on climate change and related support for renewable energy, evolving energy and resource extraction technologies, growing resource demand in the developing world, new regional and global energy governance actors, new major fossil fuel discoveries on land and underwater in states that have previously been under-resourced, rising interest in corporate social responsibility in energy companies, and the need for energy justice. The Oxford Handbook of Energy Politics synthesizes the diverse literature on these topics to provide a foundational resource for teaching and research on critical energy issues in international relations and comparative politics. Through chapters authored by both scholars and practitioners, the Handbook further develops the energy politics scholarship and community, and generates sophisticated new work that will benefit all who work on energy issues.

A Life in Code G. Stuart Smith, 2017-05-12 Protesters called it an act of war when the U.S. Coast Guard sank a Canadian-flagged vessel in the Gulf of Mexico in 1929. It took a cool-headed codebreaker solving a trunk-full of smugglers' encrypted messages to get Uncle Sam out of the mess: Elizebeth Smith Friedman's groundbreaking work helped prove the boat was owned by American gangsters. This book traces the career of a legendary U.S. law enforcement agent, from her work for the Allies during World War I through Prohibition, when she faced danger from mobsters while testifying in high profile trials. Friedman founded the cryptanalysis unit that provided evidence against American rum runners and Chinese drug smugglers. During World War II, her decryptations brought a Japanese spy to justice and her Coast Guard unit solved the Enigma ciphers of German spies. Friedman's all source intelligence model is still used by law enforcement and

counterterrorism agencies against 21st century threats.

China's Military Modernization, Japan's Normalization and the South China Sea Territorial Disputes Zenel Garcia,2019-03-21 This book assesses the Sino-Japanese strategic competition in the context of the South China Sea (SCS) territorial disputes. The South China Sea territorial disputes are quickly becoming the most significant security problem in East and Southeast Asia. Two major powers, China and Japan, have interests in the region and are pursuing different strategies that can significantly impact the outcome of the disputes. Utilizing Securitization Theory, this study evaluates the Sino-Japanese strategic competition through political narratives that galvanize the military and economic policies that are transforming the region. It highlights how these narratives, so closely bounded to the political legitimacy of current governments and supported by provocative policies, have resulted in a co-constitutive pattern of enmity and securitization, thus making it increasingly difficult to resolve the disputes.

The Digital Archives Handbook Aaron D. Purcell, 2019-02-08 The *Digital Archives Handbook* provides archivists a roadmap to create and care for digital archives. Written by archival experts and practitioners, Purcell brings together theoretical and practical approaches to creating, managing, and preserving digital archives. The first section is focused on processes and practices, including chapters on acquisitions, appraisal, arrangement, description, delivery, preservation, forensics, curation, and intellectual property. The second section is focused on digital collections and specific environments where archivists are managing digital collections. These chapters review digital collections in categories including performing arts, oral history, architectural and design records, congressional collections, and email. The book discusses the core components of digital archives—the technological infrastructure that provides storage, access, and long-term preservation; the people or organizations that create or donate digital material to archives programs, as well as the researchers use them; and the digital collections themselves, full of significant research content in a variety of formats with a

multitude of research possibilities. The chapters emphasize that the people and the collections that make up digital archives are just as important as the technology. Also highlighted are the importance of donors and creators of digital archives. Building digital archives parallels the cycle of donor work—planning, cultivation, and stewardship. During each stage, archivists work with donors to ensure that the digital collections will be arranged, described, preserved, and made accessible for years to come. Archivists must take proactive and informed actions to build valuable digital collections. Knowing where digital materials come from, how those materials were created, what materials are important, what formats or topical areas are included, and how to serve those collections to researchers in the long term is central to archival work. This handbook is designed to generate new discussions about how archivists of the twenty-first century can overcome current challenges and chart paths that anticipate, rather than merely react to, future donations of digital archives.

Ethiopian Yearbook of International Law 2018 Zeray Yihdego, Melaku Geboye Desta, Martha Belete Hailu, 2019-09-25 *EtYIL 2018* comes at a time when multilateralism and its underpinning norms of international law and institutions are under siege. At the same time, in 2018, Africa stood out for upholding multilateralism and international law. From the adoption of the Agreement establishing the African Continental Free Trade Area to the signing of peace agreements that brought to an end two decades of hostilities between Eritrea and Ethiopia, 2018 was indeed a remarkable year for international law in Africa. *EtYIL 2018* covers some of these issues, including the Eritrea-Ethiopia Claims Commission decisions on *jus ad bellum*, *jus in bello*, evidentiary and procedural matters and the role of arbitration in upholding the international rule of law. Such new developments as the lifting of UN sanctions against Eritrea and the agreements signed between Eritrea and Ethiopia are also covered in this volume. The volume further devotes considerable attention to other legal issues including: the use and misuse of European patent law to the detriment of developing countries' interests, sharing transboundary resources, production sharing agreements on extractives, evolving rules governing economic relations between Africa and the European Union in the context of Brexit, contract-farming in the African cocoa and chocolate industry, the International Criminal Court and human rights law, and cyber-attacks and the role of international law in tackling them. These chapters,

authored by experts from Africa, Asia, Europe and North America not only bring new and diverse voices to the international law discourse; they also contribute to EtYIL's overarching goal of contributing to the effort to rebalance the narrative of international law.

NTA UGC NET Paper 1 Topic-wise 50 Solved Papers (2019 to 2004) Disha Experts, 2020-07-04

No Shortcuts Max Smeets, 2022-06-02 Over the past decade, numerous states have declared cyberspace as a new domain of warfare, sought to develop a military cyber strategy and establish a cyber command. These developments have led to much policy talk and concern about the future of warfare as well as the digital vulnerability of society. No Shortcuts provides a level-headed view of where we are in the militarization of cyberspace. In this book, Max Smeets bridges the divide between technology and policy to assess the necessary building blocks for states to develop a military cyber capacity. Smeets argues that for many states, the barriers to entry into conflict in cyberspace are currently too high. Accompanied by a wide range of empirical examples, Smeets shows why governments' abilities to develop military cyber capabilities might change over time and explains the limits of capability transfer by states and private actors.

Urban Ecology for Citizens and Planners Gail Hansen, Joseli Macedo, 2021-11-09 Ideal for city residents, developers, designers, and officials looking for ways to bring urban environments into harmony with the natural world and make cities more sustainable, Urban Ecology for Citizens and Planners offers a wealth of information and examples that will answer fundamental scientific questions, guide green initiatives, and inform environmental policies and decision-making processes. This book provides an overview of the synergistic relationships between humans and nature that shape the ecology of urban green spaces. It also emphasizes the social and cultural value of nature in cities for human health and well-being. Chapters describe the basic science of natural components and ecosystems in urban areas and explore the idea of biophilic urbanism, the philosophy of building nature into the framework of cities. To illustrate these topics, chapters include projects, case studies, expert insights, and successful citizen science programs from urban areas around the world. Authors Gail Hansen and Joseli Macedo argue that citizens have increasingly important roles to play in the environmental future of the cities they live in. A valuable resource for real-world solutions, this volume encourages citizens and planners to actively engage and collaborate in improving their communities and quality of life.

Expressions of Radicalization Kristian Steiner, Andreas Önnersfors, 2017-12-15 This edited collection considers whether it is possible to discern how the level of ideology is affected by radicalization. In other words: what happens in the minds of

people before they decide to use political violence as means to attain their goals? Also this book asks: what has to happen in the minds of people in order to preclude them from using political violence as a way of attaining their goals? This volume unites scholars from several disciplines and perspectives from a number of different geographical, social and cultural contexts with the overarching aim to refine our understanding of what 'radicalization' actually implies.

The Common Bean Genome Marcelino Pérez de la Vega, Marta Santalla, Frédéric Marsolais, 2017-12-20 This book provides insights into the genetics and the latest advances in genomics research on the common bean, offering a timely overview of topics that are pertinent for future developments in legume genomics. The common bean (*Phaseolus vulgaris* L.) is the most important grain legume crop for food consumption worldwide, as well as a model for legume research, and the availability of the genome sequence has completely changed the paradigm of the ongoing research on the species. Key topics covered include the numerous genetic and genomic resources, available tools, the identified genes and quantitative trait locus (QTL) identified, and there is a particular emphasis on domestication. It is a valuable resource for students and researchers interested in the genetics and genomics of the common bean and legumes in general.

Solar Energy Research Institute for India and the United States (SERIUS) David Ginley, Kamanio Chattopadhyay, 2020-02-26 This book describes the development, functioning, and results of a successful binational program to promote significant scientific advances in Earth-abundant photovoltaics (PV) and concentrated solar power (CSP), advanced process/manufacturing technologies, multiscale modeling and reliability testing, and analysis of integrated solar energy systems. SERIUS is a consortium between India and the United States dedicated to developing new solar technologies and assessing their potential impact in the two countries. The consortium consists of nearly 50 institutions including academia, national laboratories, and industry, with the goal of developing significant new technologies in all areas of solar deployment. In addition, the program focused on workforce development through graduate students, post-doctoral students, and an international exchange program. Particular emphasis was placed on the following efforts: Creating disruptive technologies in PV and CSP through high-impact fundamental and applied research and development (R&D). Identifying and quantifying the critical technical, economic, and policy issues for solar energy development and deployment in India. Overcoming barriers to technology transfer by teaming research institutions and industry in an effective project structure. Building a new platform for binational collaboration using a formalized R&D project structure, along with effective management, coordination, and decision processes. Creating a sustainable network and workforce development program from which to build large collaborations and fostering a collaborative culture and outreach programs. This includes using existing and new methodologies for collaboration based on advanced electronic and web-based communication to facilitate functional international teams. The book summarizes the general lessons learned from these experiences.

The Securitization of Climate Change: Australian and United States' Military Responses (2003 - 2013) Michael

Durant Thomas,2017-07-25 This book examines how the armed forces of the United States and Australia have responded to the threat posed by climate change to national security. Drawing on established securitisation frameworks ('Copenhagen' and 'Paris' Schools), the author uses a combination of quantitative and qualitative techniques to systematically examine more than 3,500 speeches, policies and doctrinal articles since 2003. Importantly, the author undertakes an examination of the intersection between the political and the military spheres, probing the question of how ideology has influenced the military's uptake on the issue. In this context, the author identifies the difficulty of an ostensibly apolitical institution responding to what has become both a hyper-political issue and an unprecedented security threat. A close examination of the key political actors - their intent, outlook and political mandate for broader climate action - is therefore crucial to understanding the policy freedom and constraints within which military leaders operate. The book consists of eight chapters divided into four parts, focusing on: perspectives and methodological insights; empirical case studies; case study comparison; and concluding observations. • Offers a rare and systematic examination of military climate policy by a military officer from Australia • Identifies a divergence of Australian military climate policy from that of the US military during the Obama Administration • Develops a unique method that quantifies climate security, enabling a graphical representation for quick and ready reference ideally suited to policy-makers

Integral Innovation Odeh Rashed Al-Jayyousi,2017-04-21 Technology plays a critical role in transforming societies and economies through enhancing efficiency, connectivity and access to resources and services. The challenge remains how to harness technologies to achieve sustainable development without causing harm to human and natural capitals. Professor Odeh Rashed Al-Jayyousi argues that science, technology and innovation (STI) are underpinned by social choices and, hence, a transition to a sustainable green economy is defined by individuals' and institutions' decisions on how to use and apply these STI developments. It is, therefore, important to examine closely the ways in which social institutions and processes in the "integral worlds" (the different perspectives of reality) shape the priorities of technologies and the conditions under which their potential benefits can be reaped. He states that in order for technological innovation to provide a guarantee of sustainable economic development, it is necessary that a transfer of technology to developing countries becomes a basic principle of national development policies, and that they, in turn, are open to adopting an explicit long-term application of technological innovation. *Integral Innovation: New Worldviews* presents a conceptual framework for the evolution of technology and innovation from a historical and cultural perspective. It provides an analysis of the role of innovation and technology in sustainable development and introduces a number of international case studies, which shed light on the social learning processes for knowledge co-creation and innovation culture. It is essential reading for those interested in innovation and technology management.
