Mechanical Estimating Manual Joseph D'Amelio, 2021-01-20 First published in 2006. Clear, practical and comprehensive, this mechanical estimating manual provides an indispensable resource for contractors, estimators, owners and anyone involved with estimating mechanical costs on construction projects, including a wealth of labor and price data, formulas, charts and graphs. Covering timeproven methodologies and procedures, it offers the user a full range of readytouse forms, detailed estimating guidelines, and numerous completed examples. You'll learn from leading experts how to produce complete and accurate sheet metal, piping and plumbing estimates both quickly and easily. The manual will also be of value to supervisors, mechanics, builders, general contractors, engineers and architects for use in planning and scheduling work, budget estimating, cost control, cost accounting, checking change orders and various other aspects of mechanical estimating.

Pricing Lives W. Kip Viscusi, 2018-05-15 How society's undervaluing of life puts all of us at risk—and the groundbreaking economic measure that can fix it Like it or not, sometimes we need to put a monetary value on people's lives. In the past,

government agencies used the financial cost of death to monetize the mortality risks of regulatory policies, but this method vastly undervalued life. *Pricing Lives* tells the story of how the government came to adopt an altogether different approach—the value of a statistical life, or VSL—and persuasively shows how its more widespread use could create a safer and more equitable society for everyone. In the 1980s, W. Kip Viscusi used the method to demonstrate that the benefits of requiring businesses to label hazardous chemicals immensely outweighed the costs. VSL is the risk-reward trade-off that people make about their health when considering risky job choices. With it, Viscusi calculated how much more money workers would demand to take on hazardous jobs, boosting calculated benefits by an order of magnitude. His current estimate of the value of a statistical life is \$10 million. In this book, Viscusi provides a comprehensive look at all aspects of economic and policy efforts to price lives, including controversial topics such as whether older people's lives are worth less and richer people's lives are worth more. He explains why corporations need to abandon the misguided cost-of-death approach, how the courts can profit from increased application of VSL in assessing liability and setting damages, and how other countries consistently undervalue risks to life. *Pricing Lives* proposes sensible economic guideposts to foster more protective policies and greater levels of safety in the United States and throughout the world.

Tools for Decision Making David N. Ammons, 2008-10-17 Known for encouraging step-by-step problem solving and for connecting techniques to real-world scenarios, David Ammons' *Tools for Decision Making* covers a wide range of local government practices—from the foundational to the advanced. Brief and readable, each chapter opens with a problem in a hypothetical city and then introduces a tool to address it. Thoroughly updated with new local government examples, the second edition also incorporates chapters devoted to such additional techniques as sampling analysis, sensitivity analysis, financial condition analysis, and forecasting via trend analysis. Numerous tables, figures, exhibits, equations, and worksheets walk readers through the application of tools, and boxed features throughout each chapter present other uses for techniques, helpful online resources, and common errors. A handy guide for students and an invaluable resource and reference for practitioners.

How Labor Powers the Global Economy Emmanuel D. Farjoun, Moshé Machover, David Zachariah, 2022-04-12 This book presents a probabilistic approach to studying the fundamental role of labor in capitalist economies and develops a non-deterministic theoretical framework for the foundations of political economy. By applying the framework to real-world data, the authors offer new insights into the dynamics of growth, wages, and accumulation in capitalist development around the globe. The book demonstrates that a probabilistic political economy based on labor inputs enables us to describe central organizing principles in modern capitalism. Starting from a few basic assumptions, it shows that the working time of

employees is the main regulating variable for determining strict numerical limits on the rate of economic growth, the range of wages, and the pace of accumulation under the present global economic system. This book will appeal to anyone interested in how the capitalist mode of production works and its inherent limitations; in particular, it will be useful to scholars and students of Marxian economics. "Emmanuel Farjoun and Moshé Machover, follow up their pathbreaking work on the application of statistical physics methods to political economy in this book with David Zachariah, in which they develop methods for making educated and structured estimates of stylized facts applicable to capitalist economies. There's a lot for economists and anyone interested in the political economy of capitalism to learn from their reasoning on these issues, including their novel and challenging suggestion of bounds on the rates of increase of use-value productivity of labor, and on the range of variation of the wage share." Duncan K. Foley, Leo Model Professor of Economics, New School for Social Research

ILO Global Estimates on International Migrant Workers Natalia Popova (Labor economist), Mustafa Hakki Özel, International Labour Office. Labour Migration Branch, International Labour Office. Department of Statistics, 2018 If the right policies are in place, labour migration can help countries respond to shifts in labour supply and demand, stimulate innovation and sustainable development, and transfer and update skills. However, a lack of international standards regarding concepts, definitions and methodologies for measuring labour migration data still needs to be addressed. This report gives global and regional estimates, broken down by income group, gender and age. It also describes the data, sources and methodology used, as well as the corresponding limitations. The report seeks to contribute to the 2018 Global Compact for Safe, Orderly and Regular Migration and to achieving SDG targets 8.8 and 10.7

Operations Management in Automotive Industries Marco Gobetto, 2013-10-23 This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management, since it covers all major topics required. It treats all subjects from product development and “make or buy”-decision strategies to the manufacturing systems setting and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analysing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. This book will be of use not only to Automotive Engineering students but a wide range of readers who wish to gain insight in the world of automotive engineering and the automotive industry in general.

The Economics of Food Patrick Westhoff, 2010-01-08 Over the past two years, food prices have soared -- and plummeted. As crops are increasingly shifted to biofuel production, will food prices soar again? Will people starve as a result? What are the hidden relationships between the food on your plate and the gas in your car? Will economic recovery lead directly to massive price inflation in both food and energy? In this book, one of the world's leading experts untangles the complex global relationships between food, energy, and economics and helps readers come to their own conclusions about the future of food. Pat Westhoff reveals what really causes large swings in food prices and what is likely to cause them to rise and fall in the future. Westhoff discusses all the factors that drive changes in the cost of food: not just biofuel production, but also weather,

income growth, exchange rates, energy prices, government policies, market speculation, and more. Next, he walks through several of the most likely scenarios for the future, offering insights that will be indispensable to consumers, commodity speculators, and policymakers alike.

No Impact Man Colin Beavan, 2011-07-07 In the growing debate over eco-friendly living, it seems that everything is as bad as everything else. Do you do more harm by living in the country or the city? Is it better to drive a thousand miles or take an airplane? In NO IMPACT MAN, Colin Beavan tells the extraordinary story of his attempt to find some answers - by living for one year in New York City (with his wife and young daughter) without leaving any net impact on the environment. His family cut out all driving and flying, used no air conditioning, no television, no toilets. . . They went from making a few concessions to becoming eco-extremists. The goal? To determine what works and what doesn't, and to fashion a truly 'eco-effective' way of life. Beavan's radical experiment makes for an unforgettable and humorous memoir in an attempt to answer perhaps the most important question of all: What is the sufficient individual effort that it would take to save the planet? And what is stopping us?
