Advances in Vibration Analysis Research Farzad Ebrahimi,2011-04-04 Vibrations are extremely important in all areas of human activities, for all sciences, technologies and industrial applications. Sometimes these Vibrations are useful but other times they are undesirable. In any case, understanding and analysis of vibrations are crucial. This book reports on the state of the art research and development findings on this very broad matter through 22 original and innovative research studies exhibiting various investigation directions. The present book is a result of contributions of experts from international scientific community working in different aspects of vibration analysis. The text is addressed not only to researchers, but also to professional engineers, students and other experts in a variety of disciplines, both academic and industrial seeking to gain a better understanding of what has been done in the field recently, and what kind of open problems are in this area.

Architecture, Mysticism and Myth W. R. Lethaby,2005-01-01 The perfect temple should stand at the centre of the world, a microcosm of the universe fabric, its walls built four square with the walls of heaven. And thus they stand the world over, be they Egyptian, Buddhist, Mexican, Greek, or Christian, with the greatest uniformity and exactitude.-from Chapter III: Four Square With a wide-ranging scholarship that is astonishing, a prominent figure of the Arts and Crafts design movement explores the esoteric principles of architecture, the global, interconnected myths that underlie all the structures we build. Through his architect's eye, Lethaby looks at such diverse traditions as the ancient Norse and ancient Egyptian and at the inspiration provided by everything from the sea voyages of the Phoenicians to the astronomy of the earliest Persians, demonstrating how they inform and inspire such wonders as St. Paul's Cathedral, the Taj Mahal, the Palace at Versailles, and others. This 1891 work is a masterpiece of architectural symbolism and an essential foundation for understanding and appreciating classical design. British architect WILLIAM RICHARD LETHABY (1857-1931) was the first professor of design at the Royal College of Art. He also wrote *Greek Buildings* (1908), *Mediaeval Art* (1912), and *Architecture* (1912).

Buildings for Education Stefano Della Torre,Massimiliano Bocciairelli,Laura Daglio,Raffaella Neri,2019-12-30 This open access book presents theoretical and practical research relating to the vast, publicly financed program for the construction of new schools and the reorganization of existing educational buildings in Italy. This transformative process aims to give old

buildings a fresh identity, to ensure that facilities are compliant with the new educational and teaching models, and to improve both energy efficiency and structural safety with respect to seismic activity. The book is divided into three sections, the first of which focuses on the social role of the school as a civic building that can serve the needs of the community. Innovations in both design and construction processes are then analyzed, paying special attention to the Building Information Modeling (BIM) strategy as a tool for the integration of different disciplines. The final section is devoted to the built heritage and tools, technologies, and approaches for the upgrading of existing buildings so that they meet the new regulations on building performance. The book will be of interest to all who wish to learn about the latest insights into the challenges posed by, and the opportunities afforded by, a comprehensive school building and renovation program.

Psicologia e Architettura: studio multidisciplinare dell'ambiente Silvia Mariana De Marco, 2016-01-12 “Noi diamo forma ai nostri edifici, che a loro volta ci formano.” In queste parole espresse da Winston Churchill, all'alba del processo di ricostruzione dopo la distruzione dei bombardamenti nazisti, si concentrano il significato ed il valore che assumono le emozioni per la funzione antropica, nel suo processo di modulazione dell'ambiente naturale. La psicologia architettonica si colloca proprio come un nuovo settore di studio in questo campo. Partendo dalle caratteristiche della disciplina, attraverso l'analisi delle principali tipologie ambientali e con un particolare spunto di riflessione estrapolato da alcune espressioni culturali, questo saggio vuole mettere in evidenza il significato e l'importanza del ruolo di questo ambito scientifico nella progettazione architettonica e nella comprensione dell'influenza che determina sugli stati emotivi l'ambiente costruito.

From Novice to Expert Patricia E. Benner, 2001 This coherent presentation of clinical judgement, caring practices and collaborative practice provides ideas and images that readers can draw upon in their interactions with others and in their interpretation of what nurses do. It includes many clear, colorful examples and describes the five stages of skill acquisition, the nature of clinical judgement and experiential learning and the seven major domains of nursing practice. The narrative method captures content and contextual issues that are often missed by formal models of nursing knowledge. The book uncovers the knowledge embedded in clinical nursing practice and provides the Dreyfus model of skill acquisition applied to nursing, an interpretive approach to identifying and describing clinical knowledge, nursing functions, effective management, research and clinical practice, career development and education, plus practical applications. For nurses and healthcare professionals.

Greek Mythology and Poetics Gregory Nagy, 2018-09-05 Gregory Nagy here provides a far-reaching assessment of the relationship between myth and ritual in ancient Greek society. Nagy illuminates in particular the forces of interaction and change that transformed the Indo-European linguistic and cultural heritage into distinctly Greek social institutions between the eighth and the fifth centuries B.C. Included in the volume are thirteen of Nagy's major essays—all extensively revised for book publication—on various aspects of the Hellenization of Indo-European poetics, myth and ritual, and social ideology. The

primary aim of this book is to examine the Greek language as a reflection of society, with special attention to its function as a vehicle for transmitting mythology and poetics. Nagy's emphasis on the language of the Greeks, and on its comparison with the testimony of related Indo-European languages such as Latin, Indic, and Hittite, reflects his long-standing interest in Indo-European linguistics. The individual chapters examine the development of Hellenic poetics in the traditions of Homer and Hesiod; the Hellenization of Indo-European myths and rituals, including myths of the afterlife, rituals of fire, and symbols in the Greek lyric; and the Hellenization of Indo-European social ideology, with reference to such cultural institutions as the concept of the city-state. A path-breaking application of the principles of social anthropology, comparative mythology, historical linguistics, and oral poetry theory to the study of classics, Greek Mythology and Poetics will be an invaluable resource for classicists and other scholars of linguistics and literary theory.

Advances in Cartography J. C. Müller, Jean-Claude Muller, 1991 This volume provides an overview of existing and future research in cartography and Geographic Information Systems (GIS). Although the focus is clearly on cartographic issues, those are often related to GIS issues also, such as the storage, management and analysis of spatial data or the role of institutions in promoting or defeating new technological practices. It summarizes the joint effort of a group of international experts dealing with issues regarding the design, management, exploitation, representation and communication of spatial information. Each chapter provides a practitioner's summary which states the achievements to this date, and a projective summary which gives an outline of research in the field of cartography and GIS required in the future. There are eleven chapters, covering three main areas: 1. Design and development of geographic information, 2. Exploitation including management and standards, and 3. Applications including navigation, representation and communication. The book should be of interest to anyone involved in the production or usage of spatial information and may help to identify research priorities in Research and Development organizations relating to cartography and GIS.

Handbook of Research on Form and Morphogenesis in Modern Architectural Contexts Domenico D'Uva, 2017-11-20 This book explores experiences in the emerging area of morphogenesis, in the specific meaning of architecture. This process of architectural form-finding will be analyzed as an effort to balance perceptive efficiency with functionality. It analyzes efficient cases that bound shape within the limits of spaces made for human usability and interaction--

New and Renewable Technologies for Sustainable Development Naim Hamdia Afgan, Maria da Graça

Carvalho,2002-12-31 Sustainable development encompasses economic, social, and ecological perspectives of conservation and change in natural resources. It is generally defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. This definition is based on the ethical imperative of equity within and between generations. Moreover, apart from meeting; the basic needs of all; sustainable development implies sustaining the natural life support systems on Earth, and extending to all the opportunity to satisfy their aspirations for a better life. Hence, sustainable development is more precisely defined as a process of change in which the exploitation of resources, the direction of investments, the orientation of technological development, and institutional change are all in harmony and enhance both current and future potential to meet human needs and aspiration. To date, various definitions and stationary-state criteria of sustainability have been proposed. Many authors have been concerned with only part of the problem, such as the technological assumptions, the ability to substitute natural resources in economic transformation processes, and the resilience and importance of ecological processes. But, the social dimension did not receive the same attention, and has not been adequately integrated into formal analysis. The engineering community has to play an important role in sustainable development with appropriate evaluation of the engineering systems. In this respect energy, water and environment systems require multi-criteria evaluation methods for the assessment of the economic, environmental and social aspect of the systems.

What Is the Evidence on the Role of the Arts in Improving Health and Well-Being Daisy Fancourt,Saoirse Finn,2019-06 Over the past two decades, there has been a major increase in research into the effects of the arts on health and well-being, alongside developments in practice and policy activities in different countries across the WHO European

Region and further afield. This report synthesizes the global evidence on the role of the arts in improving health and well-being, with a specific focus on the WHO European Region. Results from over 3000 studies identified a major role for the arts in the prevention of ill health, promotion of health, and management and treatment of illness across the lifespan. The reviewed evidence included study designs such as uncontrolled pilot studies, case studies, small-scale cross-sectional surveys, nationally representative longitudinal cohort studies, community-wide ethnographies and randomized controlled trials from diverse disciplines. The beneficial impact of the arts could be furthered through acknowledging and acting on the growing evidence base; promoting arts engagement at the individual, local and national levels; and supporting cross-sectoral collaboration.

Latin America in Its Architecture Roberto Segre, 1981

Architecture of Good Intentions C. Rowe, 1994-10-31 Colin Rowe displays a witty and inspirational view of today's architectural scene.

Theory and Design in the Second Machine Age Martin Pawley, 1990 A major figure throws down the gauntlet before his colleagues. Pawley, a European architectural critic and correspondent, points out the facts of postmodern built environments--pollution, resource depletion, urban paralysis, a global information network--and accuses architects of leaving the field to commercial interests. A sequel to Reyner Banheim's *Theory and design in the first machine age* (1960). Annotation copyrighted by Book News, Inc., Portland, OR
