Ancient Healing for Modern People: Food, Herbs & Essential Oils to Detox, Cleanse & Rejuvenate the Body, Mind & Soul Michele Arnold-Pirtle, DACM, L.Ac.,2018-09-30 Western science along with Chinese Medicine both confirm that a healthy gut is necessary for our immune systems. In addition, there are more neurons in our gut than our brain, and we also know the gut and its hormones affects our brain, emotions, and behavior. Plus, the musculoskeletal system depends on digestion for healthy movement and relaxation. Our guts extract the vital nutrients we need from our food and drink to nourish our joints, bones, and muscles. Begin with a 10-day essential body detox and gut restoration program using essential oil protocols, and a healing rice congee (porridge) to release toxic buildup and kick start your metabolism. This is a gentle way to cleanse the body's organs naturally responsible for detoxification such as the liver, lungs, colon, kidneys, and skin. The essential oil protocols, 10-day daily menu, and food remedies provide support to help your organs function optimally so that they can do what they're supposed to do in metabolism and digestion. They also contribute to the release of emotional and spiritual blockages. Bring yourself back into balance!

The Oxford Handbook of the Social Science of Obesity John Cawley,2011-08-08 There is an urgent need to better understand the causes and consequences of obesity, and to learn what works to prevent or reduce obesity. This volume accurately and conveniently summarizes the findings and insights of obesity-related research from the full range of social sciences including anthropology, economics, government, psychology, and sociology. It is an excellent resource for researchers in these areas, both bringing them up to date on the relevant research in their own discipline and allowing them

to quickly and easily understand the cutting-edge research being produced in other disciplines. The Oxford Handbook of the Social Science of Obesity is a critical reference for obesity researchers and is also valuable for public health officials, policymakers, nutritionists, and medical practitioners. The first section of the book explains how each social science discipline models human behavior (in particular, diet and physical activity), and summarizes the major research literatures on obesity in that discipline. The second section provides important practical information for researchers, including a guide to publicly available social science data on obesity and an overview of the challenges to causal inference in obesity research. The third part of the book synthesizes social science research on specific causes and correlates of obesity, such as food advertising, food prices, and peers. The fourth section summarizes social science research on the consequences of obesity, such as lower wages, job absenteeism, and discrimination. The fifth and final section reviews the social science literature on obesity treatment and prevention, such as food taxes, school-based interventions, and medical treatments such as anti-obesity drugs and bariatric surgery.

The State of the World's Biodiversity for Food and Agriculture Food and Agriculture Organization of the United Nations, 2019-03-12 The State of the World's Biodiversity for Food and Agriculture presents the first global assessment of biodiversity for food and agriculture worldwide. Biodiversity for food and agriculture is the diversity of plants, animals and micro-organisms at genetic, species and ecosystem levels, present in and around crop, livestock, forest and aquatic production systems. It is essential to the structure, functions and processes of these systems, to livelihoods and food security, and to the supply of a wide range of ecosystem services. It has been managed or influenced by farmers, livestock keepers,

forest dwellers, fish farmers and fisherfolk for hundreds of generations. Prepared through a participatory, country-driven process, the report draws on information from 91 country reports to provide a description of the roles and importance of biodiversity for food and agriculture, the drivers of change affecting it and its current status and trends. It describes the state of efforts to promote the sustainable use and conservation of biodiversity for food and agriculture, including through the development of supporting policies, legal frameworks, institutions and capacities. It concludes with a discussion of needs and challenges in the future management of biodiversity for food and agriculture. The report complements other global assessments prepared under the auspices of the Commission on Genetic Resources for Food and Agriculture, which have focused on the state of genetic resources within particular sectors of food and agriculture.

The authors answer top questions such as What's really happening? and Who can we trust? and discuss stewarding the earth in light of evangelical values. Acting on climate change is not about political agendas, they say. It's about our kids. It's about being a disciple of Jesus Christ.
