**Integration of Process Knowledge into Design Support Systems** Hubert Kals, Fred van Houten, 1999-03-31 This book presents selected papers from the 1999 CIRP International Design Seminar. Design is a fundamental creative human activity. This certainly applies to the design of artifacts, the realisation of which has to meet ever-increasing demands. All ideas for new and better artifacts have been elaborated by designers, who have turned them into feasible concepts and finally transformed them into realisable product models. Design knowledge is difficult to capture. Design, as a process, is difficult to organise. The analysis and structuring of design (process) knowledge is necessary in order to build design support systems. Furthermore, substantial research effort is still needed to develop design as a 'science of synthesis'. The principles of synthesis need to be better understood before design methods and computer support tools can be developed, which are fit for integration in the industrial manufacturing process. This volume includes an introduction to design theories and methods, design and engineering processes, the role of computer support tools, and artificial intelligence in design support. The other contributions can be divided roughly into two categories. The first category deals with design support tools in relation to such topics as conceptual design, collaborative design, modelling, design optimization and evaluation. The second category treats the control of design and engineering processes in relation to subjects such as product and process knowledge, process representation, synthesis of thought and methods, integration, and concurrency.

**Computer Aided Systems Theory - EUROCAST '93** Franz Pichler, Roberto Moreno Diaz, 1994-01-28 This volume contains a selection of papers presented at the third European Computer Aided Systems Theory workshop, EUROCAST '93, held in Spain in February 1993. The workshop emphasizes interdisciplinarity with the specific goal of creating a synergy between fields such as systems theory, computer science, systems engineering and related areas. The contributions in this volume are strongly related to current problems in CAST research. They emphasize an engineering point of view concerning systems theory. Since the computer is an essential instrument in CAST research, there are close relations to specific topics in computer science. The papers are grouped into parts on systems theory and systems technology, specific methods, and applications.
