The Handbook of Attitudes Dolores Albarracin,Blair T. Johnson,Mark P. Zanna,2014-04-04 This new handbook presents, synthesizes, and integrates the existing knowledge of methods, theories, and data in attitudes. The editors' goal is to promote an understanding of the broader principles underlying attitudes across several disciplines. Divided into three parts: one on definitions and methods; another on the relations of attitudes with beliefs, behavior, and affect; and a final one that integrates these relations into the broader areas of cognitive processes, communication and persuasion, social influence, and applications, the handbook also features an innovative chapter on implicit versus explicit attitudes. With contributions from the top specialists, this handbook features unique collaborations between researchers, some who have never before worked together. Every writer was encouraged to work from as unbiased a perspective as possible. A must have for researchers in the areas of social, political, health, clinical, counseling, and consumer psychology, marketing, and communication, the handbook will also serve as an excellent reference for advanced courses on attitudes in a variety of departments.

Computational Logistics Eduardo Lalla-Ruiz,Martijn Mes,Stefan Voß,2020-09-26 This book constitutes the proceedings of the 11th International Conference on Computational Logistics, ICCL 2020, held in Enschede, The Netherlands, in September 2020. The 49 papers included in this book were carefully reviewed and selected from 73 submissions. They were organized in topical sections named: maritime and port logistics; vehicle routing and scheduling; freight distribution and city logistics; network design and scheduling; and selected topics in logistics. Due to the Corona pandemic ICCL 2020 was held as a virtual event.

Computational Logistics Martijn Mes,Eduardo Lalla-Ruiz,Stefan Voß,2021-09-21 This book constitutes the refereed proceedings of the 12th International Conference on Computational Logistics, ICCL 2021, held in September 2021. Due to COVID-19 pandemic the conference was held virtually. The 42 full papers were carefully reviewed and selected from 111 submissions. They detail the interface of complex logistics systems and advanced computational methods from the fields of operations research, business analytics, and artificial intelligence. The papers are organized in topical sections named maritime and port logistics; supply chain and production management; urban transport and collaborative logistics; routing, dispatching, and scheduling; air logistics and multi-modal transport.

*Why Do Catholics Do That?* Kevin Orlin Johnson, 2011-07-27 In *Why Do Catholics Do That?* renowned scholar and religion columnist Kevin Orlin Johnson answers the most frequently asked questions on Catholic faith, worship, culture, and customs, including: \* How the Church Makes Laws \* The Hard-Fought Genesis of the New Testament \* The Cycle of Redemption \* A Short Guide to the Meaning and Structure of the Mass \* Decoding Symbols of Scripture and the Sacraments \* The Calendar as the Image of Christ's Life \* The Rosary \* The Stations of the Cross \* Monks, Nuns, and the Rules That Guide Them \* The Pope \* The Laity in the Modern World \* Saints \* Fatima, Lourdes, and the Story of Apparitions \* The Vatican: A Holy City \* The Sign of the Cross, Christianity's Best-Known Symbol \* Candles in Prayer and Liturgy \* The Meaning of the Nativity Scene Blending religious history, a deep appreciation for art and culture, and an enlightened reverence for the traditions of the Church, *Why Do Catholics Do That?* is the definitive resource for any one who wants to learn more about the rituals, symbols, and traditions that can strengthen our faith every day. Johnson offers lucid explanations of a dizzying array of customs and beliefs. --Publishers Weekly From the Trade Paperback edition.

**Emerging Applications of Algebraic Geometry** Mihai Putinar, Seth Sullivant, 2008-12-10 Recent advances in both the theory and implementation of computational algebraic geometry have led to new, striking applications to a variety of fields of research. The articles in this volume highlight a range of these applications and provide introductory material for topics covered in the IMA workshops on Optimization and Control and Applications in Biology, Dynamics, and Statistics held during the IMA year on Applications of Algebraic Geometry. The articles related to optimization and control focus on burgeoning use of semidefinite programming and moment matrix techniques in computational real algebraic geometry. The new direction towards a systematic study of non-commutative real algebraic geometry is well represented in the volume. Other articles provide an overview of the way computational algebra is useful for analysis of contingency tables, reconstruction of phylogenetic trees, and in systems biology. The contributions collected in this volume are accessible to non-experts, self-contained and informative; they quickly move towards cutting edge research in these areas, and provide a wealth of open problems for future research.

Build Your Own High-end Audio Equipment B.V. Segment, Elektor Electronics, 1995 Top of the range hi-fi apparatus is now termed 'high-end equipment' and the name is a good indication of the prices charged for it. For those who can not, or will not, pay these prices, there is another solution offered in this book: build your own (at considerable cost savings). But this book is aimed not only at this sector of the market, but also at the many enthusiasts who want to be able to experiment and make their own modifications to their 'high-end' equipment. This book contains construction projects for solid-state and valve preamplifiers and power amplifiers, active cross-over filters, an active subwoofer, a mono/stereo compressor and a headphone amplifier.

Progress in Industrial Mathematics at ECMI 2008 Alistair D. Fitt, John Norbury, Hilary Ockendon, Eddie Wilson, 2010-07-23  
 The 15th European Conference on Mathematics for Industry was held in the agreeable surroundings of University College London, just 5 minutes walk from the British Museum in the heart of London, over the 7ve warm, sunny days from 30 June to 4 July 2008. Participants from all over the world met with the common aim of reinforcing the role of mathematics as an overarching resource for industry and business. The conference attracted over 300 participants from 30 countries, most of them participating with either a contributed talk, a minisymposium presentation or a plenary lecture. 'Mathematics in Industry' was interpreted in its widest sense as can be seen from the range of applications and techniques described in this volume. We mention just two examples. The Alan Tayler Lecture was given by Mario Primicerio on a problem arising from moving oil through pipelines when temperature variations affect the shearing properties of wax and thus modify the flow. The Wacker Prize winner, Master's student Lauri Harhanen from the Helsinki University of Technology, showed how a novel piece of mathematics allowed new software to capture real-time images of teeth from the data supplied by present day dental machinery (see ECMI Newsletter 44). The meeting was attended by leading figures from government, business and science who all shared the same aim - to promote the application of innovative mathematics to industry, and identify industrial sectors that offer the most exciting opportunities for mathematicians to provide new insight and new ideas.

*Statistical Analysis of Financial Data in R* René Carmona, 2013-12-13 Although there are many books on mathematical finance, few deal with the statistical aspects of modern data analysis as applied to financial problems. This textbook fills this gap by addressing some of the most challenging issues facing financial engineers. It shows how sophisticated mathematics and modern statistical techniques can be used in the solutions of concrete financial problems. Concerns of risk management are addressed by the study of extreme values, the fitting of distributions with heavy tails, the computation of values at risk (VaR), and other measures of risk. Principal component analysis (PCA), smoothing, and regression techniques are applied to the construction of yield and forward curves. Time series analysis is applied to the study of temperature options and nonparametric estimation. Nonlinear filtering is applied to Monte Carlo simulations, option pricing and earnings prediction. This textbook is intended for undergraduate students majoring in financial engineering, or graduate students in a Master in finance or MBA program. It is sprinkled with practical examples using market data, and each chapter ends with exercises.

Practical examples are solved in the R computing environment. They illustrate problems occurring in the commodity, energy and weather markets, as well as the fixed income, equity and credit markets. The examples, experiments and problem sets are based on the library Rsafr developed for the purpose of the text. The book should help quantitative analysts learn and implement advanced statistical concepts. Also, it will be valuable for researchers wishing to gain experience with financial data, implement and test mathematical theories, and address practical issues that are often ignored or underestimated in academic curricula. This is the new, fully-revised edition to the book Statistical Analysis of Financial Data in S-Plus. René Carmona is the Paul M. Wykes '55 Professor of Engineering and Finance at Princeton University in the department of Operations Research and Financial Engineering, and Director of Graduate Studies of the Bendheim Center for Finance. His publications include over one hundred articles and eight books in probability and statistics. He was elected Fellow of the Institute of Mathematical Statistics in 1984, and of the Society for Industrial and Applied Mathematics in 2010. He is on the editorial board of several peer-reviewed journals and book series. Professor Carmona has developed computer programs for teaching statistics and research in signal analysis and financial engineering. He has worked for many years on energy, the commodity markets and more recently in environmental economics, and he is recognized as a leading researcher and expert in these areas.
