Spectrophotometric Determination of Uranium in Nuclear Waste ,1976 A spectrophotometric method for determining uranium in nuclear waste was developed using 2-(5-bromo-2-pyridylazo)-5-diethylaminophenol (bromo-PADAP). By extracting the color into Aliquat-336 it was possible to accurately measure U at the 1 .mu.g level. No significant interferences were observed from 34 interfering ions when a tri-n-octylphosphine oxide (TOPO) pre-extraction of U was used. The effect of pH, color development time, bromo-PADAP concentration, and Aliquat-336 concentration were determined. The method was applied to the analysis of alkaline solutions, filtered solids, sludges, and salt cake nuclear waste forms. The standard deviation for the method with a TOPO pre-extraction was +3.7 percent.
