**Offshore Medicine** Robin A.F. Cox, 2012-12-06 To be asked to prepare a second edition of a book is heartening for any author or editor. Apart from the opportunity to make the corrections and amendments which are inevitable in a practical manual there is also the possibility to make additions which enhance its usefulness. Above all a further edition usually means that the book has been found to be acceptable to a large number of readers and has fulfilled a need. This is indeed the case with Offshore Medicine, which in its description of the medical aspects of offshore work has provided a unique guide to the occupational health of a new industry. The rapid development of offshore exploration for gas and oil which began in the 1960s created a whole new range of related industries. Most attention was focused on the problems of deep diving in the North Sea because of the great expansion of the diving industry, its technological advances and the high mortality of divers in the early years. Diving, however, is only a fraction of the total endeavour concerned with the offshore industry. The much larger population of workers offshore who man the rigs and barges, the toolpushers, helicopter pilots, crane drivers, scaffolders and roustabouts, geologists and so on, so sympathetically described by A. Alvarez in his recent book Off shore, A North Sea Journey, and the harsh and difficult conditions in which they often have to work are sometimes forgotten.

**Handbook of Nautical Medicine** W.H.G. Goethe, E.N. Watson, D.T. Jones, 2012-12-06 International cooperation on the health of seafarers began many years ago. As early as 1921, an international convention regarding this matter was presented to governments of maritime countries for ratification. The First World Health Assembly, in 1948, recommended that WHO should establish, with the International Labour Office, a Joint Committee on the hygiene of seafarers. The first session of this Committee, held in 1949, defined the problems affecting the health of seamen and made a number of recommendations. In the opinion of this Joint Committee, the health of seamen called for international attention for a number of reasons. By the nature of his work, the seafarer is obliged to travel from country to country and is exposed to great variations of climate and also to any disease that may be prevalent in the port of call. He may therefore become a carrier of disease, so that the protection of his health is of importance not only to himself and the other members of the crew but also to the populations of other countries he visits. Yet, on account of the nature of his employment, it is difficult to provide the seafarer with the same standard of health care that is generally available to other sections of the population.

**Tolley's Workplace Accident Handbook** Mark Tyler, 2007-08-15 Occupational safety and health management theory is now rightly focused on pro-activity, risk assessment and management. But it remains important that organizations know what they need to do when accidents happen, both to comply with legislation and to extract all the information from the incident to improve their health and safety management. Tolley's Workplace Accident Handbook presents in a single volume what needs to be done when an accident occurs - from emergency procedures and legal reporting requirements through to formal investigations and possible legal proceedings. In this new edition, chapters on first aid and accident investigation reports have been added and the rehabilitation chapter has been updated to cover the latest insurance industry initiatives. The Handbook also shows how to learn from the accident data gathered and how to implement recommendations into a company's health and safety management system. The text is supported by checklists, case studies and ready-to-use forms and templates. Health and Safety practitioners in all industries will find this Handbook is packed full of practical and legal advice. It will also be of use to lawyers dealing with accident claims, insurance risk managers, emergency planning, first aid, and enforcement officers, as well as to students on health and safety and specialist accident investigation courses. Mark Tyler is a Chartered Safety and Health Practitioner and a leading Solicitor in the area of health and safety law who has worked on numerous high profile cases such as rail crashes and legionnaires disease. **Remote Medicine: A Textbook For Trainee And Established Remote Healthcare Practitioners** John Nelson

Norman, Malcolm Valentine, 2020-07-13 This is the first major textbook on the emerging speciality of remote medicine. The modern concept emerged in the 1970s when the medical directors of the main oil companies operating in the North Sea — BP, Shell and Mobil — sought advice from the University sector since the morbidity and mortality levels of offshore workers had become unacceptable. A system of healthcare was jointly developed and applied by the industrial doctors and the academic doctors of Aberdeen University which worked well and greatly improved the healthcare of the offshore personnel. It was subsequently validated by duplication for the very different scientific population of the British Antarctic Survey where it worked even better. It was next introduced to the oilfields of the Middle East — Qatar (QGPC, Offshore and Onshore), Abu Dhabi (ADMA and ADCO) and Oman (PDO) where it worked equally well. The Aberdeen Universities next collaborated with the UAE University in Abu Dhabi to evaluate and develop telemedicine mainly in the area of education and research and they established early transcontinental courses and conferences together with joint supervision and production of higher degrees between collaborating universities in different parts of the world. The recently established International Remote Healthcare Association (IRHCA), backed by the University of Glasgow, the UAE University in Abu Dhabi and the Siberian State Medical University has established an ongoing study to determine the education and skills required to produce a competent Remote Healthcare Practitioner. The chapters in this book contain the knowledge base currently thought by the IRHCA to be necessary to produce a competent remote healthcare practitioners and thus to allow curricular development of the new courses necessary for the establishment of University qualifications and for the regulating authorities to design examinations and establish appropriate registration. Since this is a new speciality the continuing research of the IRHCA is necessary to act as an audit to ensure that the information in the book, and the courses derived from it remain relevant and also to detect omissions as they are recognised.

Construction Health and Safety in Coastal and Maritime Engineering Ian Cruickshank,Stephen Cork,2005 Over £500 million is spent on coastal and maritime construction in the UK every year. This work is particularly hazardous due to the hostile environment and uncertainty caused by the combination of storms, waves, currents and tides. At present, there is little health and safety related guidance available to assist coastal/maritime clients, designers, contractors and other stakeholders to ensure this work is undertaken in a safe manner. The CDM Regulations, amongst others regulations, require these parties to consider and assess construction risks.
