Landscape and Sustainable Development Yves Luginbühl,Peter Howard,2016-03-09 Previously published in French by Éditions Quae, this volume presents findings of a major research programme into landscape and sustainable development. While led by French scholars, the research team and geographical scope of the project was international, collaborative and comparative. Using case studies from across Europe, the interdisciplinary team of contributors discuss the relationship between landscape as defined by the European Landscape Convention and the concept of sustainable development. This English edition has a new introduction written by Yves Luginbühl and Peter Howard. The book is then divided into three sections: Biophysical Realities and Landscape Practice; Landscape Resources-Inheritance and Renewal; Governance and Participation. Some of the topics covered, such as wind-farm landscapes, will be familiar to English language readers, but others, such as footpath economics, non-woodland trees, inter-generational equity, and the insistence on the necessary developments in governance less so.

After the Software Wars Keith Curtis,2009 Computers are an advancement whose importance is comparable to the invention of the wheel or movable type. While computers and the Internet have already changed many aspects of our lives, we still live in the dark ages of computing because proprietary software is still the dominant model. One might say that the richest alchemist who ever lived is my former boss, Bill Gates. (Oracle founder Larry Ellison, and Google co-founders Sergey Brin and Larry Page are close behind.) Human knowledge increasingly exists in digital form, so building new and better models requires the software to be improved. People can only share ideas when they also share the software to display and modify them. It is the expanded use of free software that will allow a greater ability for people to work together and increase the pace of progress. This book will demonstrate that a system where anyone can edit, share, and review the body of work will lead not just to something that works, but eventually to the best that the world can achieve! With better cooperation

among our scientists, robot-driven cars is just one of the many inventions that will arrive -- pervasive robotics, artificial intelligence, and much faster progress in biology, all of which rely heavily on software. - Publisher.

Headaches in Women Mark W. Green,2019-10-01 Women suffer from headaches far more than men. According to the World Health Organization, migraine is one of the most disabling medical conditions. The understanding of the pathophysiology of migraine has changed dramatically over the past decade, leading to more rational and targeted

treatments. Since most migraineurs are young women, use of contraception, management of headaches with menstruation, pregnancy, lactation, and menopause are important issues addressed in this text. Headaches are often inherited, and, as such, the book also discusses genetic issues, particularly relevant in this era of customized medicine. The hormonal management of transgenders is important as many will experience severe headaches during their transitions. Comorbidities, including psychiatric syndromes and strokes, are also presented in detail. This text will be of interest to all practitioners who manage women with headaches.

The Higher Learning in America Thorstein Veblen,2017-08-07 This eBook edition of The Higher Learning in America has been formatted to the highest digital standards and adjusted for readability on all devices. Thorstein Veblen (1857-1929) was an American economist and sociologist. He is well known as a witty critic of capitalism. Veblen is famous for the idea of conspicuous consumption. Conspicuous consumption, along with conspicuous leisure, is performed to demonstrate wealth or mark social status. Veblen explains the concept in his best-known book, The Theory of the Leisure Class. Within the history of economic thought, Veblen is considered the leader of the institutional economics movement. Veblen's distinction between institutions and technology is still called the Veblenian dichotomy by contemporary economists. In the beginning of his academic career Veblen had difficulties obtaining a university position, whether because he was discriminated for being Norwegian, or openly identified as an agnostic. These difficulties later inspired him to write The Higher Learning in America. In this book he claimed that true academic values were sacrificed by universities in favor of their own self-interest and profitability.
