Making Data Talk David E. Nelson (M.D.), Bradford W. Hesse, Robert T. Croyle, 2009 The demand for health information continues to increase, but the ability of health professionals to provide it clearly remains variable. The aim of this book is (1) to summarize and synthesize research on the selection and presentation of data pertinent to public health, and (2) to provide practical suggestions, based on this research summary and synthesis, on how scientists and other public health practitioners can better communicate data to the public, policy makers, and the press in typical real-world situations. Because communication is complex and no one approach works for all audiences, the authors emphasize how to communicate data

better (and in some instances, contrast this with how to communicate data worse), rather than attempting a cookbook approach. The book contains a wealth of case studies and other examples to illustrate major points, and actual situations whenever possible. Key principles and recommendations are summarized at the end of each chapter. This book will stimulate interest among public health practitioners, scholars, and students to more seriously consider ways they can understand and improve communication about data and other types of scientific information with the public, policy makers, and the press. Improved data communication will increase the chances that evidence-based scientific findings can play a greater role in improving the public's health.

Communicating Science Toss Gascoigne, Bernard Schiele, Joan Leach, Michelle Riedlinger, Luisa Massarani, Bruce V. Lewenstein, Peter Broks, 2020-09-14 Modern science communication has emerged in the twentieth century as a field of study, a body of practice and a profession—and it is a practice with deep historical roots. We have seen the birth of interactive science centres, the first university actions in teaching and conducting research, and a sharp growth in employment of science communicators. This collection charts the emergence of modern science communication across the world. This is the first volume to map investment around the globe in science centres, university courses and research, publications and conferences as well as tell the national stories of science communication. How did it all begin? How has development varied from one country to another? What motivated governments, institutions and people to see science communication as an answer to questions of the social place of science? *Communicating Science* describes the pathways followed by 39 different countries. All continents and many cultures are represented. For some countries, this is the first time that their science communication story has been told.

The Group in Society John Gastil, 2010 The Group in Society meets the challenges of teaching courses on small groups by revealing the full complexity of small groups and their place in society. It shows students the value of learning how to carefully study a group's history and context, rather than merely learning a fixed set of group participation skills. This text brings together disparate theories and research (from communication, social psychology, organizational and managerial studies, and sociology) in a way that helps students make sense of a complex body of scholarship on groups. Features & Benefits Part I □ Theorizing Groups: builds a strong theoretical foundation, exploring social theory and the group, forming

and joining groups, the life and death of the group, and changing society through group life Part II □ Understanding Groups in Context: explores the histories, purposes, memberships of a variety of groups—including juries, families, executive committees, study groups, and political action groups—thus enabling the student reader to speak clearly about group formation, norms, roles, tasks, and relationships. Detailed end-of-chapter case studies explicitly connect with the concepts, theories, and empirical findings introduced in each respective chapter; examples include the powerful group bonds of the modern terrorist cell; the wired network of groups in the anti-Globalization movement; and the deliberation of a jury in a murder trial Teaching & Learning Ancillaries Teaching resources are available at www.groupinsociety.org and include chapter summaries, discussion questions, and practical applications; a sample course schedule; Embedded Systems Framework PowerPoint slides; group project assignments, group project worksheets, and a group project description and contract; and links to useful Web resources such as small group teaching resources and active wikis on small groups. An open-access student study site at www.sagepub.com/gastilstudy features e-flashcards, practice quizzes, and other resources to help students enhance their comprehension and improve their grade.
