How America Stacks Up Edward Alden, Rebecca Strauss, 2016-02-01 American leadership in the world is built on the foundation of its economic strength. Yet the United States faces enormous economic competition abroad and threats to its economy at home. In *How America Stacks Up: Economic Competitiveness and U.S. Policy*, Edward Alden, Bernard L. Schwartz senior fellow at the Council on Foreign Relations and director of the Renewing America initiative, and Rebecca Strauss, associate director of Renewing America, focus on those areas of economic policy that are the most important for reinforcing America's competitive strengths. Covering education, transportation, trade and investment, corporate tax, worker retraining, regulation, debt and deficits, and innovation, *How America Stacks Up* shows how, in a highly competitive global economy, these seemingly domestic issues are all crucial to U.S. success in the global economy. The line between domestic economic policy and foreign economic policy is now almost invisible, and getting these policies right matters for more than just U.S. living standards. The United States' ability to influence world events rests on a robust, competitive economy. But without further investment in education, infrastructure, and innovation, Alden and Strauss show, the United States runs the risk of endangering its greatest competitive advantage. Through insightful analysis and engaging graphics, *How America Stacks Up* outlines the challenges faced by the United States and prescribes solutions that will ensure a healthy, competitive U.S. economy for years to come.

Critical Role of Animal Science Research in Food Security and Sustainability National Research Council, Division on Earth and Life Sciences, Board on Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31 By 2050 the world's population is projected to grow by one-third, reaching between 9 and 10 billion. With globalization and expected growth in global affluence, a substantial increase in per capita meat, dairy, and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security. Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development, technology, and resource needs for research in the field of animal agriculture, both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security; evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems; and identifies factors that may impact the ability of the United States to meet demand for animal products, including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information, and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies, and new ways of approaching agriculture if the food, feed, and fiber needs of the global population are to be met. The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century.

Rethinking Research Methods in an Age of Digital Journalism Michael Karlsson, Helle Sjøvaag, 2018-10-18 The digital infrastructure of media production, dissemination and consumption is becoming increasingly complex, presenting the challenge of how we should research the digital journalism environment. Digital journalism takes many forms - we therefore need to revise, improve, adjust and even invent methods to understand emerging forms of journalism. In this book, scholars at the forefront of methodological innovations in digital journalism research share their insights on how to collect, process and analyse the diverse expressions of digital journalism, including online news, search results, hyperlinks and social media posts. As digital journalism content often comes in the form of big data, many of these new approaches depart from the traditional methods used in media research in significant ways. As we move towards new ways of understanding digital journalism, the methods developed for such purposes also need to be grounded in scientific rigour. This book aims to share some of the emerging processes by which these methods, tools and approaches are designed, implemented and validated. As such, this book not only constitutes a benchmark for thinking about research methods in digital journalism, it also provides an entry point for graduate students and seasoned scholars aiming to do research on digital journalism. This book was originally published as a special issue of Digital Journalism.

The Study of Science and Religion Carl Reinhold Brakenhielm, 2018-06-06 The main aim of this book is to contribute to the relationship between science and religion. This book aims to do constructive theological work out of a particular cultural context. The point of departure is contemporary Swedish religion and worldviews. One focus is the process of biologization (i.e., how the worldviews of the general public in Sweden are shaped by biological science). Is there a gap

between Swedes in general and the perceptions of Swedish clergy? The answer is based on sociological studies on science and religion in Sweden and the United States. Furthermore, the book contains a study of Swedish theologians, from Nathan Soderblom to the present Archbishop Antje Jackelen, and their shifting understanding of the relation between science and religion. The philosophical aspects of this relation are given special consideration. What models of the relation inform the contemporary scholarly discussion? Are science and religion in conflict, separate, or in mutual creative interaction?

Routledge Handbook of Sustainability Indicators Simon Bell, Stephen Morse, 2018-06-14 This handbook provides researchers and students with an overview of the field of sustainability indicators (SIs) as applied in the interdisciplinary field of sustainable development. The editors have sought to include views from the center ground of SI development but also divergent ideas which represent some of the diverse, challenging and even edgy observations which are prominent in the wider field of SI thinking. The contributions in this handbook:

- clearly set out the theoretical background and history of SIs, their origins, roots and initial goals
- expand on the disciplines and modalities employed to develop SIs of various kinds
- assess the various ways in which SI data are gathered and the availability (over space and time) and quality issues that surround them
- explore the multiplex world of SIs as expressed in agencies around the world, via examples of SI practice and the lessons that have emerged from them
- critically review the progress that SIs have made over the last 30 years
- express the divergence of views which are held about the value of SIs, including differing theories on their efficacy, efficiency and ethics
- explore the frontier of contemporary SI thinking, reviewing ante/post and systemic alternatives

This

multidisciplinary and international handbook will be of great interest to researchers, students and practitioners working in sustainability research and practice.

Evolving Ourselves Juan Enriquez, Steve Gullans, 2015-11-05 If Darwin were alive today, he would likely recognize that technology has evolved so far, and so fast, that the origin, evolution, and future of life itself is no longer just driven by natural selection and random mutation. Why are genetic conditions like autism, asthma, and allergies on the rise at unprecedented, biologically impossible speeds? What traits does our world select for, and what does that mean for us? Will our children be a different species? Today's humans have altered the nature of our world so much, and developed such profound capabilities for re-crafting our bodies and environment, that random mutation and natural selection are no longer the primary determinants of which species survives and how they change over time. The nature of the evolution of our world is now increasingly defined and driven by: Un-Natural Selection-- where the traits being selected for have little to nothing to do with our ability to survive and thrive--and Non-Random Mutation-- in which drastic changes to our environment wreak havoc on what gene are expressed and passed down. *Evolving Ourselves* is the story of how our massive human perturbation and, increasingly, our specific designs and desires are altering life on Earth. It is a chronicle of where our remarkable new capabilities for altering our bodies, other living creatures, and our environment are taking us in the near term, and introduces the possibility that we might cause our own extinction in the long run.

Gender, Science and Innovation Helen Lawton Smith, Colette Henry, Henry Etzkowitz, Alexandra Poulouvasilis, 2020-01-31 *Gender, Science and Innovation* explores the contemporary challenges facing women scientists in academia and develops effective strategies to improve gender equality. Addressing an important gap in current knowledge, chapters offer a range of international perspectives from diverse contexts, countries and institutional settings. This book is an essential contribution to the literature for academics, researchers and policy makers concerned with improving gender equality in academia and seeking to learn from the experiences of others.

Rat Trap Pandora Pound, 2023-08-28 With devastating logic and clarity, Dr Pandora Pound, Research Director at Safer Medicines Trust, comprehensively dismantles the case for animal research, bringing to an end the 150-year-old debate about its value once and for all.

Life Finds a Way Andreas Wagner, 2019-06-11 How the principles of biological innovation can help us overcome creative challenges in art, business, and science In *Life Finds a Way*, biologist Andreas Wagner reveals the deep symmetry between innovation in biological evolution and human cultural creativity. Rarely is either a linear climb to perfection--instead, progress is typically marked by a sequence of peaks, plateaus, and pitfalls. For instance, in Picasso's forty-some iterations of *Guernica*, we see the same combination of small steps, incessant reshuffling, and large, almost reckless, leaps that characterize the way evolution transformed a dinosaur's grasping claw into a condor's soaring wing. By understanding these

principles, we can also better realize our own creative potential to find new solutions to adversity. Ultimately, *Life Finds a Way* offers a new framework for the nature of creativity, enabling us to better adapt, grow, and change in art, business, or science--that is, in life.

The Protection and Conservation of Water Resources Hadrian F. Cook,2017-03-08 This book is about water - in Britain, and in the world. It is about water resources, their conservation, protection of water quality for human consumption and aquatic ecosystems. Since the publication of the first edition in 1998, major political and regulatory changes have taken place; this book provides a clear and comprehensive update of conservation and water resource management issues in the UK over the past two decades, and - in an expansion of its original UK perspective - now includes examples of global best practice. The UK's 2003 adoption of the EU Water Framework Directive has had enormous implications for the conservation and management of our water resources. In 2016, with the UK's decision to leave the EU, the governance scene is entering upon an unpredictable future regarding its major water resource policies. *The Protection and Conservation of Water Resources*, Second edition provides a clear and comprehensive update of conservation and water resource management issues. Chapter 1 deals with sustainability and water policy, outlines the issues and challenges, and asks: what is integrated water management? Chapter 2 reviews water availability and sufficiency in Britain, while Chapter 3 explores the dynamic between institutions and legislative framework. Chapter 4 introduces the catchment approach, and chapters 5 and 6 explore the issues of sustaining bulk supply and the imperatives of climate change. Chapter 7 looks at the contemporary background to water quality issues, and Chapter 8 provides case studies of catchment problems, both urban and rural. Chapter 9 describes solutions in land use change, including technical fixes and their sustainability. Chapter 10 is concerned with emerging governance arrangements, and Chapter 11 takes a global view, looking at successful examples around the world to find positive lessons from Europe, north America and Australia.
