Assessment Education Beth Tarasawa, Amelia Gotwals, Cara Jackson, 2020-09-01 Using assessment systems to improve student outcomes requires shared understanding and collaboration among education stakeholders at multiple levels. *Assessment Education: Bridging Research, Theory, and Practice to Promote Equity and Student Learning* presents a powerful call to action for an assessment system that advances equity and offers educators practical applications that promote sound instructional decision making. Each section outlines a research-based approach that supports classroom teaching and student learning. We then draw on the expertise of various education leaders (most notably members of the National Taskforce on Assessment Education) to provide case studies of on-the-ground examples of what these strategies look like in different settings. Every chapter includes stories from the field from various perspectives—teachers, principals, district administrators, and other educational leaders. We conclude with reflection questions that provide an opportunity for readers to examine how the chapter connects to their own context.

William Greaves Scott MacDonald, Jacqueline Najuma Stewart, 2021-06-01 William Greaves is one of the most significant and compelling American filmmakers of the past century. Best known for his experimental film about its own making, *Symbiopsychotaxiplasm: Take One*, Greaves was an influential independent documentary filmmaker who produced, directed, shot, and edited more than a hundred films on a variety of social issues and on key African American figures ranging from Muhammad Ali to Ralph Bunche to Ida B. Wells. A multitalented artist, his career also included stints as a songwriter, a member of the Actors Studio, and, during the late 1960s, a producer and cohost of *Black Journal*, the first national television show focused on African American culture and politics. This volume provides the first comprehensive overview of Greaves's remarkable career. It brings together a wide range of material, including a mix of incisive essays from critics and scholars, Greaves's own writings, an extensive meta-interview with Greaves, conversations with his wife and collaborator Louise Archambault Greaves and his son David, and a critical dossier on Symbiopsychotaxiplasm. Together, they illuminate Greaves's mission to use filmmaking as a tool for transforming the ways African Americans were perceived by others and the ways they saw themselves. This landmark book is an essential resource on Greaves's work and his influence on independent cinema and African-American culture.

The History of Alternative Test Methods in Toxicology, 2018-10-20 The History of Alternative Test Methods in Toxicology uses a chronological approach to demonstrate how the use of alternative methods has evolved from their conception as adjuncts to traditional animal toxicity tests to replacements for them. This volume in the History of Toxicology and Environmental Health series explores the history of alternative test development, validation, and use, with an emphasis on humanity and good science, in line with the Three Rs (Replacement, Reduction, Refinement) concept expounded by William Russell and Rex Burch in 1959 in their now classic volume, *The Principles of Humane Experimental Technique*. The book describes the historical development of technologies that have influenced the application of alternatives in toxicology and

safety testing. These range from single cell monocultures to sophisticated, miniaturised and microfluidic organism-on-a-chip devices, and also include molecular modelling, chemoinformatics and QSAR analysis, and the use of stem cells, tissue engineering and hollow fibre bioreactors. This has been facilitated by the wider availability of human tissues, advances in tissue culture, analytical and diagnostic methods, increases in computational processing, capabilities, and a greater understanding of cell biology and molecular mechanisms of toxicity. These technological developments have enhanced the range and information content of the toxicity endpoints detected, and therefore the relevance of test systems and data interpretation, while new techniques for non-invasive diagnostic imaging and high resolution detection methods have permitted an increased role for human studies. Several key examples of how these technologies are being harnessed to meet 21st century safety assessment challenges are provided, including their deployment in integrated testing schemes in conjunction with kinetic modelling, and in specialised areas, such as inhalation toxicity studies. America the Great Edward Hawkins Sisson,2014-06-22 America the Great is the result of five years' research and writing that began in late 2009 in response to the contemporary American tea party movement and criticisms that the movement's participants did not know the history and theory of the original 1773 Boston Tea Party from which the modern movement takes its name. The extensive library of original books, newspapers, magazines, etc., now available (primarily via google books) to anyone over the Internet, means that researchers have available to them the university libraries of the world. The availability of accurate original documents made it possible to expand the original scope of research into other historical events, and into other countries (primarily Great Britain), and enabled the work to develop into a more general examination of theories of human dignity, and of the differing conception of government that arises depending on the conception of human dignity that is characteristic of the people that is creating that government.
