How To Be Gay David M. Halperin, 2012-08-21 No one raises an eyebrow if you suggest that a guy who arranges his furniture just so, rolls his eyes in exaggerated disbelief, likes techno music or show tunes, and knows all of Bette Davis's best lines by heart might, just possibly, be gay. But if you assert that male homosexuality is a cultural practice, expressive of a unique subjectivity and a distinctive relation to mainstream society, people will immediately protest. Such an idea, they will say, is just a stereotype-ridiculously simplistic, politically irresponsible, and morally suspect. The world acknowledges gay male culture as a fact but denies it as a truth. David Halperin, a pioneer of LGBTQ studies, dares to suggest that gayness is a specific way of being that gay men must learn from one another in order to become who they are. Inspired by the notorious undergraduate course of the same title that Halperin taught at the University of Michigan, provoking cries of outrage from both the right-wing media and the gay press, *How To Be Gay* traces gay men's cultural difference to the social meaning of style. Far from being deterred by stereotypes, Halperin concludes that the genius of gay culture resides in some of its most despised features: its aestheticism, snobbery, melodrama, adoration of glamour, caricatures of women, and obsession with mothers. The insights, impertinence, and unfazed critical intelligence displayed by gay culture, Halperin argues, have much to offer the heterosexual mainstream.

Boom Magazine 031 - July 2015 Boom Magazine Asia, 2015-07-09 July's arrived, and it bears gifts. This month, two of the world's biggest names in music land in our midst - on the same night! Electronic fans, book your tickets to Macau for

Deadmau5 on the 22nd, who we introduce a little more to you in our A-Side (P14). Back in Hong Kong, influential Brit band Blur flies into the HKCEC. In our Special Feature (P22) we chat with drummer Dave Rowntree about new album *The Magic Whip*, which was recorded in our very own streets. Also recorded in Hong Kong is local dream pop band Thud's new *Floret* E.P, and over in Macau, alt. trio Turtle Giant gear up to release their second full-length album, *Many Mansions I*, recorded in a local theatre. Check out our interviews with the bands, who both have strong opinions on the music scene in Asia (P18). Down in the underground scene, Oliver Clasper gets up close and personal with IDM innovator Lee Gamble in *On the Decks* (P26) after an exquisite set at The Empty Gallery. As always, flip over to Mixer (P48) for our new music recommendations. This month in *On the Rocks* (P44) we descend the Shin Hing Steps into brand new '80s themed hangout spot NEO, and in *Boom's Kitchen* (P42) we explore Hong Kong's sweet tooth - the everlasting love for Japanese desserts. In *Play Away* (P28), we've put together a detailed weekend itinerary for Tokyo. Plus, festival-goers should check out our Summer Jams fashion shoot (P32) for this year's essential sunshine wear. Check out the best upcoming events in our calendar (P4), catch up on your monthly Zodiac (P58), and see how many of your friends you can spot in our photos of last month's parties! (P62)

Techno-Orientalism David S. Roh,Betsy Huang,Greta A. Niu,2015-04-17 What will the future look like? To judge from many speculative fiction films and books, from *Blade Runner* to *Cloud Atlas*, the future will be full of cities that resemble Tokyo, Hong Kong, and Shanghai, and it will be populated mainly by cold, unfeeling citizens who act like robots. *Techno-Orientalism* investigates the phenomenon of imagining Asia and Asians in hypo- or hyper-technological terms in literary, cinematic, and new media representations, while critically examining the stereotype of Asians as both technologically advanced and intellectually primitive, in dire need of Western consciousness-raising. The collection's fourteen original essays trace the discourse of techno-orientalism across a wide array of media, from radio serials to cyberpunk novels, from Sax Rohmer's *Dr. Fu Manchu* to *Firefly*. Applying a variety of theoretical, historical, and interpretive approaches, the contributors consider techno-orientalism a truly global phenomenon. In part, they tackle the key question of how these stereotypes serve to both express and assuage Western anxieties about Asia's growing cultural influence and economic dominance. Yet the book also examines artists who have appropriated techno-orientalist tropes in order to critique racist and imperialist attitudes. *Techno-Orientalism* is the first collection to define and critically analyze a phenomenon that pervades both science fiction and real-world news coverage of Asia. With essays on subjects ranging from wartime rhetoric of race and technology to science fiction by contemporary Asian American writers to the cultural implications of Korean gamers, this volume offers innovative perspectives and broadens conventional discussions in Asian American Cultural studies.

Dreamscapes of Modernity Sheila Jasanoff,Sang-hyun Kim,2015-09-02 *Dreamscapes of Modernity* offers the first book-

length treatment of sociotechnical imaginaries, a concept originated by Sheila Jasanoff and developed in close collaboration with Sang-Hyun Kim to describe how visions of scientific and technological progress carry with them implicit ideas about public purposes, collective futures, and the common good. The book presents a mix of case studies—including nuclear power in Austria, Chinese rice biotechnology, Korean stem cell research, the Indonesian Internet, US bioethics, global health, and more—to illustrate how the concept of sociotechnical imaginaries can lead to more sophisticated understandings of the national and transnational politics of science and technology. A theoretical introduction sets the stage for the contributors' wide-ranging analyses, and a conclusion gathers and synthesizes their collective findings. The book marks a major theoretical advance for a concept that has been rapidly taken up across the social sciences and promises to become central to scholarship in science and technology studies.

Racial Ambiguity in Asian American Culture Jennifer Ann Ho, 2015-05-12 The sheer diversity of the Asian American populace makes them an ambiguous racial category. Indeed, the 2010 U.S. Census lists twenty-four Asian-ethnic groups, lumping together under one heading people with dramatically different historical backgrounds and cultures. In *Racial Ambiguity in Asian American Culture*, Jennifer Ann Ho shines a light on the hybrid and indeterminate aspects of race, revealing ambiguity to be paramount to a more nuanced understanding both of race and of what it means to be Asian American. Exploring a variety of subjects and cultural artifacts, Ho reveals how Asian American subjects evince a deep racial ambiguity that unmoors the concept of race from any fixed or finite understanding. For example, the book examines the racial ambiguity of Japanese American nisei Yoshiko Nakamura deLeon, who during World War II underwent an abrupt transition from being an enemy alien to an assimilating American, via the Mixed Marriage Policy of 1942. It looks at the blogs of Korean, Taiwanese, and Vietnamese Americans who were adopted as children by white American families and have conflicted feelings about their “honorary white” status. And it discusses Tiger Woods, the most famous mixed-race Asian American, whose description of himself as “Cablinasian”—reflecting his background as Black, Asian, Caucasian, and Native American—perfectly captures the ambiguity of racial classifications. Race is an abstraction that we treat as concrete, a construct that reflects only our desires, fears, and anxieties. Jennifer Ho demonstrates in *Racial Ambiguity in Asian American Culture* that seeing race as ambiguous puts us one step closer to a potential antidote to racism.

Technology and International Relations Giampiero Giacomello, Francesco N. Moro, Marco Valigi, 2021-04-30 Exploring how changes in advanced technology deeply affect international politics, this book theoretically engages with the overriding relevance of investments in technological research, and the ways in which they directly foster a country's economic and military standing. Scholars and practitioners present important insights on the technical and social issues at the core of technology competition.

Command Of The Air General Giulio Douhet,2014-08-15 In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh “Boom” Trenchard of Great Britain and William “Billy” Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet’s central vision-that command of the air is all important in modern warfare-has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

Cultural Techniques Bernhard Siegert,2015-05-01 In a crucial shift within posthumanistic media studies, Bernhard Siegert dissolves the concept of media into a network of operations that reproduce, displace, process, and reflect the distinctions fundamental for a given culture. Cultural Techniques aims to forget our traditional understanding of media so as to redefine the concept through something more fundamental than the empiricist study of a medium’s individual or collective uses or of its cultural semantics or aesthetics. Rather, Siegert seeks to relocate media and culture on a level where the distinctions between object and performance, matter and form, human and nonhuman, sign and channel, the symbolic and the real are still in the process of becoming. The result is to turn ontology into a domain of all that is meant in German by the word Kultur. Cultural techniques comprise not only self-referential symbolic practices like reading, writing, counting, or image-making. The analysis of artifacts as cultural techniques emphasizes their ontological status as “in-betweens,” shifting from firstorder to second-order techniques, from the technical to the artistic, from object to sign, from the natural to the cultural, from the operational to the representational. Cultural Techniques ranges from seafaring, drafting, and eating to the production of the sign-signal distinction in old and new media, to the reproduction of anthropological difference, to the study of trompe-l’oeils, grids, registers, and doors. Throughout, Siegert addresses fundamental questions of how ontological distinctions can be replaced by chains of operations that process those alleged ontological distinctions within the ontic. Grounding posthumanist theory both historically and technically, this book opens up a crucial dialogue between new German media theory and American postcybernetic discourses.

Techno-Magism Orrin N. C. Wang,2022-01-04 Techno-Magism explores how British Romantic literature abuts and is

organized around both print and non-print media. The book explores not only the print, pictorial art, and theater of early nineteenth-century England and Europe but also communicative technologies invented after the British Romantic period, such as photography, film, video, and digital screens. This proleptic abutting points to one way we can understand the implicit exceptionality wagered by reading Romanticism through media studies and media theory. Techno-Magism argues that both media studies and the concept of mediation in general can benefit from a more robust confrontation with, or recovery of, the arguments of deconstruction, an unavoidable consequence of thinking about the relationship between Romanticism and media. The book thinks that relationship through the catachrestic practice of a techno-magism, a technics of inscription always outside the causalities of a dialectical economy. The book further pursues two interrelated ideas: the structural incommensurability of the cut and the unapologetic presentism of the constellation. Marked by its late capitalist moment of composition, the book explores the continuity between the social character of Romantic and post-Romantic media, in terms of commodity culture, revolution, and the ecological devastation of the anthropocene.

Psychoanalysis of Technoscience Hub Zwart ,2019 This book presents a psychoanalysis of technoscience. Basic concepts and methods developed by Freud, Jung, Bachelard and Lacan are applied to case histories (palaeoanthropology, classical conditioning, virology). Rather than by disinterested curiosity, technoscience is driven by desire, resistance and the will to control. Moreover, psychoanalysis focusses on primal scenes (Dubois' quest for the missing link, Pavlov's discovery of the conditioned reflex) and opts for triangulation: comparing technoscience to different scenes provided by novels, so that Dubois's work is compared to missing link novels by Verne and London and Pavlov's experiments with Skinner's Walden Two, while virology is studied through the lens of viral fiction.

Generative Art Matt Pearson,2011-06-29 Summary Generative Art presents both the technique and the beauty of algorithmic art. The book includes high-quality examples of generative art, along with the specific programmatic steps author and artist Matt Pearson followed to create each unique piece using the Processing programming language. About the Technology Artists have always explored new media, and computer-based artists are no exception. Generative art, a technique where the artist creates print or onscreen images by using computer algorithms, finds the artistic intersection of programming, computer graphics, and individual expression. The book includes a tutorial on Processing, an open source programming language and environment for people who want to create images, animations, and interactions. About the Book Generative Art presents both the techniques and the beauty of algorithmic art. In it, you'll find dozens of high-quality examples of generative art, along with the specific steps the author followed to create each unique piece using the Processing programming language. The book includes concise tutorials for each of the technical components required to create the book's images, and it offers countless suggestions for how you can combine and reuse the various techniques to create your own works. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning.

Cognition in the Wild Edwin Hutchins,1996-08-26 Edwin Hutchins combines his background as an anthropologist and an open ocean racing sailor and navigator in this account of how anthropological methods can be combined with cognitive theory to produce a new reading of cognitive science. His theoretical insights are grounded in an extended analysis of ship navigation—its computational basis, its historical roots, its social organization, and the details of its implementation in actual practice aboard large ships. The result is an unusual interdisciplinary approach to cognition in culturally constituted activities outside the laboratory—in the wild. Hutchins examines a set of phenomena that have fallen in the cracks between the established disciplines of psychology and anthropology, bringing to light a new set of relationships between culture and cognition. The standard view is that culture affects the cognition of individuals. Hutchins argues instead that cultural activity systems have cognitive properties of their own that are different from the cognitive properties of the individuals who participate in them. Each action for bringing a large naval vessel into port, for example, is informed by culture: the navigation team can be seen as a cognitive and computational system. Introducing Navy life and work on the bridge, Hutchins makes a clear distinction between the cognitive properties of an individual and the cognitive properties of a system. In striking contrast to the usual laboratory tasks of research in cognitive science, he applies the principal metaphor of cognitive science—cognition as computation (adopting David Marr's paradigm)—to the navigation task. After comparing modern Western navigation with the method practiced in Micronesia, Hutchins explores the computational and cognitive properties of systems that are larger than an individual. He then turns to an analysis of learning or change in the organization of cognitive systems at several scales. Hutchins's conclusion illustrates the costs of ignoring the cultural nature of cognition, pointing to the ways in which contemporary cognitive science can be transformed by new meanings and interpretations. Higher Education in the Era of the Fourth Industrial Revolution Nancy W. Gleason,2018-06-21 This open access collection examines how higher education responds to the demands of the automation economy and the fourth industrial revolution. Considering significant trends in how people are learning, coupled with the ways in which different higher education institutions and education stakeholders are implementing adaptations, it looks at new programs and technological advances that are changing how and why we teach and learn. The book addresses trends in liberal arts integration of STEM innovations, the changing role of libraries in the digital age, global trends in youth mobility, and the development of lifelong

learning programs. This is coupled with case study assessments of the various ways China, Singapore, South Africa and Costa Rica are preparing their populations for significant shifts in labour market demands – shifts that are already underway. Offering examples of new frameworks in which collaboration between government, industry, and higher education institutions can prevent lagging behind in this fast changing environment, this book is a key read for anyone wanting to understand how the world should respond to the radical technological shifts underway on the frontline of higher education.
