Clinical Practice Guidelines We Can Trust Institute of Medicine,Board on Health Care Services,Committee on Standards for Developing Trustworthy Clinical Practice Guidelines,2011-06-16 Advances in medical, biomedical and health services research have reduced the level of uncertainty in clinical practice. Clinical practice guidelines (CPGs) complement this progress by establishing standards of care backed by strong scientific evidence. CPGs are statements that include recommendations intended to optimize patient care. These statements are informed by a systematic review of evidence and an assessment of the benefits and costs of alternative care options. Clinical Practice Guidelines We Can Trust examines the current state of clinical practice guidelines and how they can be improved to enhance healthcare quality and patient outcomes. Clinical practice guidelines now are ubiquitous in our healthcare system. The Guidelines International Network (GIN) database currently lists more than 3,700 guidelines from 39 countries. Developing guidelines presents a number of challenges including lack of transparent methodological practices, difficulty reconciling conflicting guidelines, and conflicts of interest. Clinical Practice Guidelines We Can Trust explores questions surrounding the quality of CPG development processes and the establishment of standards. It proposes eight standards for developing trustworthy clinical practice guidelines emphasizing transparency; management of conflict of interest ; systematic review-guideline development intersection; establishing evidence foundations for and rating strength of guideline recommendations; articulation of recommendations; external review; and updating. Clinical Practice Guidelines We Can Trust shows how clinical practice guidelines can enhance clinician and patient decision-making by translating complex scientific research findings into recommendations for clinical practice that are relevant to the individual patient encounter, instead of implementing a one

size fits all approach to patient care. This book contains information directly related to the work of the Agency for Healthcare Research and Quality (AHRQ), as well as various Congressional staff and policymakers. It is a vital resource for medical specialty societies, disease advocacy groups, health professionals, private and international organizations that develop or use clinical practice guidelines, consumers, clinicians, and payers.

Iceland International Monetary Fund. Monetary and Capital Markets Department,2023-07-28 The Icelandic authorities are committed to addressing climate change issues and reaching ambitious objectives to reduce GHG emissions. Iceland is naturally exposed to significant natural hazards, such as volcanic eruptions and extreme weather conditions. The country is also exposed to physical risks resulting from climate change, such as sea acidification and melting glaciers (a long-term risk), as well as climate change transition risks, for instance, concerning the fisheries and transportation sectors. Still, Iceland can leverage its unique assets to overcome challenges of adapting to climate change. One asset is Iceland's abundant domestically produced renewable energies that cover nearly all the country's heat and electricity production needs. The 2020 Climate Action Plan and the 2021 Iceland's Strategy on Adaptation to Climate Change include ambitious objectives toward GHG emissions' neutrality.

The Boundaries in Financial and Non-Financial Reporting Laura Girella, 2018-03-16 Although the need to expand the boundaries of financial reporting has been discussed since the mid-1990s, little consideration has been given to the evolution and discourses of integrated reporting of non-financial aspects. Yet by investigating how and why an organisation defines and its reporting boundaries, it is possible to understand what is truly valued (or not) in its business model. This innovative book reviews the guidelines and frameworks from the major relevant international organisations including: the International Accounting Standards Board, Global Reporting Initiative, Sustainability Accounting Standards Board, International

Integrated Reporting Council, Carbon Disclosure Standards Board, and the World Intellectual Capital Initiative, and analyses their development and impact on the boundaries of financial and non-financial reporting. Illustrated with case studies and interviews with representatives of these organisations, this concise volume makes a significant contribution to the future of reporting theory and practice. It will be of great interest to advanced students, researchers, practitioners and policy makers.
