Sustainable Ecological Engineering Design Mohammad Dastbaz, Chris Gorse, 2016-05-19 This book focuses on the impacts of the built environment, and how to predict and measure the benefits and consequences of changes taking place to address sustainability in the development and building industries. It draws together the best treatments of these subjects from the Leeds Sustainability Institute's inaugural International Conference on Sustainability, Ecology, Engineering, Design for Society (SEEDS). The focus of discussion is on understanding how buildings and spaces are designed and nurtured to obtain optimal outcomes in energy efficiency and environmental impacts. In addition to examining technical issues such as modeling energy performance, emphasis is placed on the health and well-being of occupants. This holistic approach

addresses the interdependence of people with the built and natural environments. The book's contents reflect the interdisciplinary and international collaboration critical to assembly of the knowledge required for positive change.

The 9th Symbol LaZealtrice Hall-Powell, Deana Zhollis, 2011-11-24 Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. . . . And we will all dance at the Grand Ball, her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, Oh dear! Oh dear! I shall be too late!

Disability-affirmative Therapy Rhoda Olkin, 2017 Disability-Affirmative Therapy (D-AT) helps clinicians put the disability of a client into proper focus, without making one of the usual mistakes associated with cross-cultural therapy: overinflating the role of the disability, or underestimating its profound effects. D-AT provides a template for evaluation - nine areas to be discussed with the client - that allows understanding of the client's lifetime experiences with disability.

Sensory Cue Integration Julia Trommershauser, Konrad Kording, Michael S. Landy, 2011-09-21 This book is concerned with sensory cue integration both within and between sensory modalities, and focuses on the emerging way of thinking about cue combination in terms of uncertainty. These probabilistic approaches derive from the realization that our sensors are noisy and moreover are often affected by ambiguity. For example, mechanoreceptor outputs are variable and they cannot distinguish if a perceived force is caused by the weight of an object or by force we are producing ourselves. The probabilistic approaches elaborated in this book aim at formalizing the uncertainty of cues. They describe cue combination as the nervous system's attempt to minimize uncertainty in its estimates and to choose successful actions. Some computational approaches described in the chapters of this book are concerned with the application of such statistical ideas to real-world cue-combination problems. Others ask how uncertainty may be represented in the nervous system and used for cue combination. Importantly, across behavioral, electrophysiological and theoretical approaches, Bayesian statistics is emerging as a common language in which cue-combination problems can be expressed.

Designing the Music Business Guy Morrow,2020-06-10 This book addresses the neglect of visual creativities and content, and how these are commercialised in the music industries. While musical and visual creativities drive growth, there is a lack of literature relating to the visual side of the music business, which is significant given that the production of meaning and value within this business occurs across a number of textual sites. Popular music is a multimedia, discursive, fluid, and expansive cultural form that, in addition to the music itself, includes album covers; gig and tour posters; music videos; set, stage, and lighting designs; live concert footage; websites; virtual reality/augmented reality technologies; merchandise designs; and other forms of visual content. As a result, it has become impossible to understand the meaning and value of music without considering its relation to these visual components and to the interrelationships between them. Using design culture theory, participant observation, interviews, case studies, and a visual methodology to explore the topic, this research-based book is a valuable study aid for undergraduate and postgraduate students of subjects including the music business, design, arts management, creative and cultural industries studies, business and management studies, and media and communications.

The Merging of the Senses Barry E. Stein,M. Alex Meredith,1993-01-22 Bringing together neural, perceptual, and behavioral studies, The Merging of the Senses provides the first detailed review of how the brain assembles information from different sensory systems in order to produce a coherent view of the external world. Stein and Meredith marshal evidence from a broad array of species to show that interactions among senses are the most ancient scheme of sensory organization, an integrative system reflecting a general plan that supersedes structure and species. Most importantly, they explore what is known about the neural processes by which interactions among the senses take place at the level of the single cell.The

authors draw on their own experiments to illustrate how sensory inputs converge (from visual, auditory, and somatosensory modalities, for instance) on individual neurons in different areas of the brain, how these neurons integrate their inputs, the principles by which this integration occurs, and what this may mean for perception and behavior. Neurons in the superior colliculus and cortex are emphasized as models of multiple sensory integrators.
