King Zeno Nathaniel Rich, 2019-01-10 New Orleans, 1918. The birth of jazz, the Spanish flu, an axe murderer on the loose. The lives of a traumatized cop, a conflicted Mafia matriarch, and a brilliant trumpeter converge. In Nathaniel Rich's King Zeno, the Crescent City gets the rich, dark, sweeping novel it so deserves. New Orleans, a century ago: a city determined to reshape its destiny and, with it, the nation's. Downtown, a new American music is born. In Storyville, prostitution is outlawed and the police retake the streets with maximum violence. In the Ninth Ward, laborers break ground

on a gigantic canal that will split the city, a work of staggering human ingenuity intended to restore New Orleans's faded mercantile glory. The war is ending and a prosperous new age dawns. But everything is thrown into chaos by a series of murders committed by an axe-wielding maniac with a peculiar taste in music. The axe murders scramble the fates of three people from different corners of town. Detective William Bastrop is an army veteran haunted by an act of wartime cowardice, recklessly bent on redemption. Isadore Zeno is a jazz cornetist with a dangerous side hustle. Beatrice Vizzini is the widow of a crime boss who yearns to take the family business straight. Each nurtures private dreams of worldly glory and eternal life, their ambitions carrying them into dark territories of obsession, paranoia, and madness. In New Orleans, a city built on swamp, nothing stays buried long.

What is Life? Addy Pross, 2012-09-27 Seventy years ago, Erwin Schrödinger posed a profound question: 'What is life, and how did it emerge from non-life?' This problem has puzzled biologists and physical scientists ever since. Living things are hugely complex and have unique properties, such as self-maintenance and apparently purposeful behaviour which we do not see in inert matter. So how does chemistry give rise to biology? What could have led the first replicating molecules up such a path? Now, developments in the emerging field of 'systems chemistry' are unlocking the problem. Addy Pross shows how the different kind of stability that operates among replicating molecules results in a tendency for chemical systems to become more complex and acquire the properties of life. Strikingly, he demonstrates that Darwinian evolution is the biological expression of a deeper, well-defined chemical concept: the whole story from replicating molecules to complex life is one continuous process governed by an underlying physical principle. The gulf between biology and the physical sciences is finally becoming bridged. This new edition includes an Epilogue describing developments in the concepts of fundamental forms of stability discussed in the book, and their profound implications. Oxford Landmark Science books are 'must-read' classics of modern science writing which have crystallized big ideas, and shaped the way we think.

Discovering Psychology Laura Freberg, John T. Cacioppo, 2012-04-13 In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it.

Crawley, 2019-02-01 Exploring Biology in the Laboratory: Core Concepts is a comprehensive manual appropriate for introductory biology lab courses. Race, Monogamy, and Other Lies They Told You Agustín Fuentes, 2015-05 There are three major myths of human nature: humans are divided into biological races; humans are naturally aggressive; and men and women are truly different in behavior, desires, and wiring. In an engaging and wide-ranging narrative, Agustín Fuentes counters these pervasive and pernicious myths about human behavior. Tackling misconceptions about what race, aggression, and sex really mean for humans, Fuentes incorporates an accessible understanding of culture, genetics, and evolution, requiring us to dispose of notions of "nature or nurture." Presenting scientific evidence from diverse fields—including anthropology, biology, and psychology—Fuentes devises a myth-busting toolkit to dismantle persistent fallacies about the validity of biological races, the innateness of aggression and violence, and the nature of monogamy and differences between the sexes. A final chapter plus an appendix provide a set of take-home points on how readers can myth-bust on their own. Accessible, compelling, and original, this book is a rich and nuanced account of how nature, culture, experience, and choice interact to influence human behavior.
