*Air Lubricated and Air Cavity Ships* Gennadiy Alexeevitch Pavlov,Liang Yun,Alan Bliault,Shu-Long He,2020-03-28 Air Lubrication and Air Cavity Technology is a major development that has emerged in recent years as a means to reduce resistance and powering for many types of ships, and an efficient design for high speed marine vessels. This book introduces the mechanisms for boundary layer drag reduction and concepts studied in early research work. Air bubble and sheet lubrication for displacement vessels is outlined and the key projects introduced. Generation of low volume flow air cavities under the hull of displacement, semi displacement and planing vessels are introduced together with theoretical and empirical analysis and design methods. Resistance reduction, power reduction and fuel efficiency are covered for both displacement and high speed vessels. Air layer and air cavity effects on vessel static and dynamic stability are covered, linked to regulatory requirements such as IMO. Seaway motions and reduced impact load of high speed craft in waves are discussed including model test results. Integration of propulsion systems for optimum powering is summarized. A design proposal for a wave piercing air cavity craft is included in an appendix. A comprehensive listing of document resources and internet locations is provided for further research.

*The Triple Helix* Henry Etzkowitz,2008-02-05 A Triple Helix of university-industry-government interactions is the key to

innovation in increasingly knowledge-based societies. As the creation, dissemination, and utilization of knowledge moves from the periphery to the center of industrial production and governance, the concept of innovation, in product and process, is itself being transformed. In its place is a new sense of 'innovation in innovation' - the restructuring and enhancement of the organizational arrangements and incentives that foster innovation. This triple helix intersection of relatively independent institutional spheres generates hybrid organizations such as technology transfer offices in universities, firms, and government research labs and business and financial support institutions such as angel networks and venture capital for new technology-based firms that are increasingly developing around the world. The Triple Helix describes this new innovation model and assists students, researchers, and policymakers in addressing such questions as: How do we enhance the role of universities in regional economic and social development? How can governments, at all levels, encourage citizens to take an active role in promoting innovation in innovation and, conversely, how can citizens so encourage their governments? How can firms collaborate with each other and with universities and government to become more innovative? What are the key elements and challenges to reaching these goals?

**Duke's Cut** Cyril J. Wood, 2009-06-15 The Bridgewater Canal is distinguished as England's first canal and its development marked the beginning of a transport revolution that provided a crucial foundation for industrial and commercial development in England. Since its completion in 1765, the canal has been regularly used by commercial and passenger traffic; it was one of the major routes of the North West that helped Manchester to develop as a centre of trade and industry in the 19th century. In *The Duke's Cut: The Bridgewater Canal*, Cyril J. Wood recounts the fascinating history of the Bridgewater canal from its conception and construction to its subsequent successes including its use as a leisure waterway today. His detailed commentary is complemented by his descriptive guide to cruising the canal and valuable navigational information. Illustrated with more than 150 images, this comprehensive history and guide will appeal to local historians and canal enthusiasts alike.
