What is colorblindness? \* Color blindness (color vision deficiency) is a condition in which certain colors cannot be distinguished, and is most commonly due to an inherited condition. Red/Green color blindness is by far the most common (99%) form and causes problems in distinguishing reds and greens. Another color deficiency Blue/Yellow also exists, but is rare (1%) and there is no commonly available test for it. \* There is no treatment for color blindness, nor is it usually the cause of any significant disability. However, it can be very frustrating for individuals affected by it. Those who are not color blind seem to have the misconception that color blindness means that a color blind person sees only in black and white or shades of gray. While this sort of condition is possible, it is extremely rare.\* The Ishihara color test is a test for color blindness\* It was named after its designer, Dr. Shinobu Ishihara (1879-1963), a professor at the University of Tokyo, who first published his tests in 1917.\* It makes use of the peculiarity that in red-green blindness, blue and yellow appear remarkably bright compared to red and green.\* It consists of a number of colored plates, on each plate is printed a circle made of many different sized dots of slightly different colors, spread in a random manner. *Colour Vision Deficiencies* X B. Drum,J.D. Moreland,A. Serra,2012-12-06 Since its inception, the International Research Group on Colour Vision Deficiencies (IRGCVD) has followed the policy that the Symposium Pro ceedings should be as close as possible to a complete record of the scientific content of the meeting. This policy has the advantage of providing an accurate picture of the current state of the art in research on color vision deficiencies, but it also has the disadvantage that papers typically span a wide range of quality. In this volume, however, we have instituted a system of peer review in an effort to enhance scientific quality as much as possible while continuing our past policy of publishing all submitted manuscripts. In addition to being edited for English composition and grammar, each of the papers included here has been carefully reviewed by an IRGCVD member selected for his or her expertise in the specific topic of the paper. Reviewers were instructed to include in their comments suggestions for improvement rather than recom or rejection. In our opinion, this review process mendations for publication has resulted in substantial improvement of many of the articles and has enhanced the value of the

publication. We are pleased to acknowledge the efforts of our reviewers and offer them our sincere thanks for their important contributions to Colour Vision Deficiencies X. The Editors B. Drum, J. D. Moreland & A. Serra (eds. ), Colour Vision Deficiencies X, p. xiii.

**Visual Impairments** National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Disability Determination for Individuals with Visual Impairments, 2002-08-17 When children and adults apply for disability benefits and claim that a visual impairment has limited their ability to function, the U.S. Social Security Administration (SSA) is required to determine their eligibility. To ensure that these determinations are made fairly and consistently, SSA has developed criteria for eligibility and a process for assessing each claimant against the criteria. Visual Impairments: Determining Eligibility for Social Security Benefits examines SSA's methods of determining disability for people with visual impairments, recommends changes that could be made now to improve the process and the outcomes, and identifies research needed to develop improved methods for the future. The report assesses tests of visual function, including visual acuity and visual fields whether visual impairments could be measured directly through visual task performance or other means of assessing disability. These other means include job analysis databases, which include information on the importance of vision to job tasks or skills, and measures of health-related quality of life, which take a person-centered approach to assessing visual function testing of infants and children, which differs in important ways from standard adult tests.

Season of Violence Shintaro Ishihara, 2004-12-15 Violent, sensual, and seemingly un-Japanese, the stories in Season of Violence nevertheless depict Japanese teenagers of the present in compulsive but often unconscious revolt against the moral codes of old Japan. Yet these stories tell of youth who offer no real, modern morality to replace the old—only the anti-morality of indiscriminate sex, brutality, and living for today's pleasures and sensations. These are stories of teenagers who came to be known as Taiyozoku—the Sun Tribe. Season of Violence won for its young author, Shintaro Ishihara, Japan's coveted

Akutagawa Prize. Thus, *Season of Violence* is a good deal more than fast-moving, forcefully written fiction; it is vital social commentary on contemporary Japan which gives unexpected dimension to the traditional cardboard image of the Japanese student as somber, diligent, and obedient. Ishihara's stories of Japanese who were born in the ashes of war and defeat and raised in the fast-moving world of the postwar boom are stark accounts of a period when the values of the past have been discarded for misguided materialism and pleasure-seeking.
